

3G Trackimo Car/Marine GPS Tracker + Power Regulator + Waterproof Box

This Waterproof box provided marine conditions protection to your Trackimo tracker. It can be used for cars or any marine vessel: boats, outboards or Jet-ski.

How to use:

1. After charging the tracker, place your Trackimo 2G or 3G device inside the waterproof box.
2. Connect the micro USB connector to the Trackimo. Close the cover till you hear a strong "click".
3. Connect the (+)Plus (red wire) and the (-)Minus (black wire) to the 12v-24v battery or power wiring of your vessel. The little fuse on the red wire, will protect your vessel's battery from short circuits and/or wiring accidents. If for some reason your vessel's battery will be drained or disconnected, Trackimo will work for few days with its internal battery till it's drained. Once your vessel's battery is restored, the Trackimo will turn itself on automatically.

Thank you for using Trackimo.
